

Health History and Examination Form for Children, Youth and Adults attending and staffing 2012 Summer Camps of the Ukrainian American Youth Association, Inc.

THIS FORM MUST BE RECEIVED AT THE CAMP OFFICES NO LATER THAN 15 DAYS BEFORE THE FIRST DAY OF CAMP. Meningitis response and health history must be filled out by parents/guardians of camp or staff applicants. Update is required annually. Health exam must be completed and form must be signed by a licensed physician (on page 2). Keep a copy of the completed form for your records. Any changes to this form should be provided to camp health personnel upon participant's arrival in camp. Provide complete information so that the camp can be aware of all your needs.

Two photocopies of front and back of health insurance card, AND 2 copies of Medical form,

AND 2 copies of registration form must be submitted with camp registration forms.

Important – these boxes must be completed for attendance at camp

This health history is correct and complete as far as I know. The person herein named has permission to engage in all camp activities except as noted.

I hereby give permission to the camp to provide, seek, and consent to routine health care, administration of prescribed medications, and emergency treatment for me/my child, as may be necessary, including but not limited to x-rays, routine tests and treatment, and/or hospitalization. I also give permission for the camp to arrange related transportation. I agree to the release of any records necessary for treatment, referral, billing, or insurance purposes.

It is my intention that the camp be treated as acting *in loco parentis* if the person herein named is a minor. Further, it is my intention that the appropriate representatives of the camp be treated as "personal representatives" for the purposes of disclosing protected health information pursuant to the privacy regulations promulgated pursuant to the Health Insurance Portability and Accountability Act of 1996. I hereby agree (pursuant to 45 CFR § 164.510(b)) to the disclosure to camp representatives of the protected health information of the person herein described, as necessary: (i) to provide relevant information to the camp representatives related to the person's ability to participate in camp activities; and (ii) to provide relevant information to the camp representatives to keep me informed of my child's health status.

In the event I cannot be reached in an emergency, I hereby give permission to the physician selected by the camp to secure and administer treatment, including hospitalization, for the person named above. This completed form may be photocopied for trips out of camp.

Signature of parent or guardian or adult camper/staffer

Date

Printed Name

I also understand and agree to abide by any restrictions placed on my participation in camp activities.

Meningococcal Meningitis Vaccination Response: A completed response for every camper who attends camp for seven or more nights, is required to be maintained at the camp, pursuant to New York State Public Health Law §2167.

 \square My child has had the meningococcal meningitis immunization (MenomuneTM) within the past 10 years.

Date received:

Note: The vaccine's protection lasts for approximately 3 to 5 years. Revaccination may be considered within 3-5 years I have read, or have had explained to me, the information regarding meningococcal meningitis disease. I understand the risks of not receiving the vaccine. I have decided that my child will <u>not</u> obtain immunization against meningococcal meningitis disease.

Meningococcal Disease

New York State Department of Health Bureau of Communicable Disease Control

Information for College Students and Parents of Children at Residential Schools and Overnight Camps

What is meningococcal disease?

Meningococcal disease is a severe bacterial infection of the bloodstream or meninges (a thin lining covering the brain and spinal cord).

Who gets meningococcal disease?

Anyone can get meningococcal disease, but it is more common in infants and children. For some college students, such as freshmen living in dormitories, there is an increased risk of meningococcal disease. Between 100 and 125 cases of meningococcal disease occur on college campuses every year in the United States; between 5 and 15 college students die each year as result of infection. Currently, no data are available regarding whether children at overnight camps or residential schools are at the same increased risk for disease. However, these children can be in settings similar to college freshmen living in dormitories. Other persons at increased risk include household contacts of a person known to have had this disease, immunocompromised people, and people traveling to parts of the world where meningitis is prevalent.

How is the germ meningococcus spread?

The meningococcus germ is spread by direct close contact with nose or throat discharges of an infected person. Many people carry this particular germ in their nose and throat without any signs of illness, while others may develop serious symptoms.

What are the symptoms?

High fever, headache, vomiting, stiff neck and a rash are symptoms of meningococcal disease. Among people who develop meningococcal disease, 10-15% die, in spite of treatment with antibiotics. Of those who live, permanent brain damage, hearing loss, kidney failure, loss of arms or legs, or chronic nervous system problems can occur.

How soon do the symptoms appear?

The symptoms may appear 2 to 10 days after exposure, but usually within 5 days.

What is the treatment for meningococcal disease?

Antibiotics, such as penicillin G or ceftriaxone, can be used to treat people with meningococcal disease.

Is there a vaccine to prevent meningococcal meningitis?

Yes, a safe and effective vaccine is available. The vaccine is 85% to 100% effective in preventing four kinds of bacteria (serogroups A, C, Y, W-135) that cause about 70% of the disease in the United States.

Is the vaccine safe? Are there adverse side effects to the vaccine?

The vaccine is safe, with mild and infrequent side effects, such as redness and pain at the injection site lasting up to two days.

What is the duration of protection from the vaccine?

After vaccination, immunity develops within 7 to 10 days and remains effective for approximately 3 to 5 years. As with any vaccine, vaccination against meningitis may not protect 100% of all susceptible individuals.

How do I get more information about meningococcal disease and vaccination?

Contact your family physician or your student health service. Additional information is also available on the websites of the New York State Department of Health, <u>www.health.state.ny.us</u>; the Centers for Disease Control and Prevention <u>www.cdc.gov/ncid/dbmd/diseaseinfo</u>; and the American College Health Association, <u>www.acha.org</u>.
